

Stoner® M883 Polyurethane Release

Major manufacturer of bus seating Prefers Stoner® M883 Polyurethane Release

Company was having mold build up and cost issues with the product they were working with. Stoner was called to trial M883 to provide a solution to the companies issues.

Item # M883

This seat manufacture switched to M883 Release because:

- Less mold build up, improved surface finish on the parts produced, no skinning while providing an open cell finish.
- No skinning while providing an open cell finish.

Office furniture, auto arm rests, GB Packers Cheese Heads!!! Molders can run more parts without the same wax build up. Works best on molds that are run at a lower temperature (less than 125 degrees Fahrenheit) equipment or additional application or spraying systems.

M883 less mold build up with improved surface finish.
