

Stoner A246 Mold Lubricant and Release Agent

Silicone Emulsion Mold Release

Description-

Stoner A246 is a multi-purpose silicone base release agent and lubricant. Due to its extremely high viscosity formulation, A246 performs well as high molding temperatures or when parts are intricate or difficult to remove. Concentrated for greatest economy, A246 can be diluted with up to 50 parts water.

Primary uses-

Release agent used in the manufacture of molded products.

Benefits-

- Excellent anti-stick release agent and lubricant.
- Extra high viscosity formulation for added release performance.
- Water based concentrate is non-flammable and easy to use.
- Can be diluted with up to 50 parts water for greatest economy.

General Characteristics-

Product Classification..... Silicone Emulsion Release Agent.
Appearance.....Milky White
Odor.....None to very faint.
Suggested maximum dilution with water.....50:1
Flash Point.....None
Shelf Life and Storage.....Minimum 1 year at room temperature in an un-opened pail.
Suitable Solvents.....Water

Application-

Concentrate may be diluted with up to 50 parts water prior to use. Suggest diluting 1 part concentrate with 25 parts water initially and adjusting accordingly. Apply by spraying, brushing, wiping, or dipping onto mold. Use a light uniform coating for best results

Packaging-

Available in 5 and 55 gallon containers.

Safety and Handling Information-

For detailed safety and handling information before using, please refer to the attached MSDS.
