

Stoner**Stoner® E302**
ROCKET RELEASE

Major Supplier of Automotive Parts Prefers Stoner E302 Rocket Release

A major plastic contract injection molded parts supplier to the automotive industry changed from a silicone-based mold release agent to Stoner E302 Rocket Release because of a customer's requirement that no silicones be used on its parts.

Item # E302

Stoner E302 allows part to be post processed with no further cleaning.

This molder switched to Rocket Release because:

- It allowed parts to later be painted, pad printed, and bonded with adhesives without further cleaning.
- Made parts easy to release.

This easy-to-use Stoner aerosol meant that Rocket Release could be easily moved to multiple presses throughout the molder's facility without further investment in spray equipment or additional application or spraying systems.
