

Stoner

Stoner® M714 Thermoset Mold Release

Norway's Ship of the Year 2015 uses Stoner M714 Thermoset Mold Release to save weight and eliminate corrosion!

Stoner's customer Fibergrate uses M714 Thermoset Mold Release. Fibergrate are experts at molding 'non-slip' grating for the areas on ships, oil rigs, industrial settings where people work and walk. They mold these advanced grates out of polyester / vinyl ester resins and fiberglass. The tool looks like a 'waffle iron' and is heated to 160 - 180°F (71 to 82°C). Stoner M714 Thermoset Mold Release is applied to ensure a high quality, cost effective release.

Stoner M714 has many advantages including:

- it contains no silicone, so parts can be decorated/painted without a special cleaning step.
- saves time: parts can be removed quickly from molds.
- gives excellent part appearance.
